Claim Rejections - 35 USC § 112

Claims 12 and 13 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claims 12 and 13 are rejected because the specification does not describe "withdrawing the delivery system from its proximity to the muscle".

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Altman.

Altman disclose a method for stimulating angiogenesis by employing a delivery system in the form of a catheter which is inserted into heart wall muscle (see Abstract; col. 10, col. 43-45; figure 11; col. 12, lines 10-13). The catheter may be inserted into the muscle and seals the connection (see figures 7, 9, and 13). Insertion of a plurality of bodies within the muscle is accomplished through delivery of particles as in Figure 18. Insertion of any material into the muscle will cause an inflammatory reaction and this characteristic is inherent to penetration of any tissue. The flexible coil of figure 7 is dimensionally adapted for implantation within the muscle. The instant claims are anticipated by Altman.
